List of Abstract Aynu Symbols

These symbols encode abstract aynu concepts, information, theory, objects, existence, reality, meta-game-theory things, and many other things [more to develop] that transcend our ability to comprehend. These can be used to create and code abstract-aynu game structs and objects that players will want to collect and possess based on their abstract aynu concepts, information, theory, objects, existence, reality, meta-game-theory things, and many other things [more to develop] that give them abstract aynu game-properties, uses, values, abilities and many other things in the game that motivate players to acquire them and give them [abstract aynu-theory reasons] to acquire them. Players will then be able to figure out which aynu [abstract aynu-theory reasons/constructs/[Illion]/[Aynu-coded-things] makes them [abstract-aynu theory happy and gives them every [abstract aynu-theory thing they want out of playing and having assets in the game, abstract-aynu-theory ultimate paradise and happiness, ultimate transcendental meaning of reality, concepts only expressible in aynu using the aynu code [Elysion][Firdaws][Aynu][Ero][Tyrion][Tyrios] which are the ultimate things I want from game development and which will come from acquiring things within the game to possess in my account forever]. Having figured these things out, they will then be able to figure out which abstract-aynu-coded game-structs/objects have the right aynu-coded data and aynu-coded aynu-game-mechanics/systems/abilities/powers/properties/data/possessions/things/[more to develop] and aynu-coded game-play properties to satisfy and achieve these aynu-theory things.

All game-play properties/things are determined by code written using the following abstract and transcendent aynu-code-symbols. What these symbols mean and how they endow game-structs and game-objects with [abstract-aynu-game-theory-things] and with game-play properties transcends mortal description and can only be encoded using the following aynu code :
